BrandProof

Evidence before publication.

Team YOGI2KANWAR

A campaign review workspace that checks content against owner-confirmed brand rules, exposes its evidence and leaves publication decisions with people.

INPUT	CHECK	DECIDE
PDF guidelines, caption and private poster	Versioned rules, real OCR, bounded claims and measured visual samples	Inspect evidence, record reasons and approve the current snapshot

Release status

This report describes the local Round 3 candidate. It includes the three promised improvements and a bounded India advertising-risk extension. Local test results are reported on page 5. Public deployment, manual UI acceptance and PostgreSQL/container acceptance remain separate release gates.

Project: brand-proof-tau.vercel.app
Source: github.com/YogitaKanwar/BrandProof
Working branch: feat/brandproof-improvements-20261028

The repository homepage returned HTTP 200 during inspection. Its API health endpoint returned HTTP 429; that observation is not a successful public workflow acceptance. The user requested a local release only.

Guidelines with evidence. Measurements with limits.

1 / PDF guideline import

Owners import a PDF text layer. Supported directives become pending candidates with exact page quotations, offsets, filename and document digest. Explicit owner confirmation creates a new source version. A rule edit preserves history and cannot inherit a quotation that no longer supports it.

The extractor is bounded: 5 MiB, 30 pages, 8,000 characters per page, 60,000 total and a 15-second isolated worker. Scanned/blank pages are visibly unavailable; mixed documents can be partial. Narrative content outside the supported grammar produces no invented rule.

What a judge can try

Download the fictional sample PDF from the import panel, upload it, inspect its quotations and confirm a candidate. The fixture includes price, date, wording, background colour, contrast and alt-text requirements. Repeated imports can create pending duplicates; conflicting confirmed facts require clarification.

2 / Measured visual consistency and accessibility

Supported flat backgrounds are compared with confirmed brand colours using CIE76 distance. Reliable OCR word samples report foreground/background colours, measured contrast and the configured ratio. Missing descriptions and supported literal price/date omissions produce alt-text findings.

The ordinary antialiased-text defect has been repaired using a solid ink core, colour-blend and glyph-boundary checks. Black/white samples measure 21:1. Low-contrast grey produces a measured finding. Small text with insufficient solid ink, gradients, mixed colours and uncertain OCR can abstain.

These are bounded sample checks. Alt-text presence does not establish semantic quality. Raster dimensions do not establish WCAG large-text status, and sampled contrast does not certify full accessibility.

PROMISE 3

Governance Insights

Owners can see recurring finding categories across campaigns and inspect the exact source versions, findings and reasons behind reviewer decisions.

MEASURE	POLICY
Category recurrence	Count observations and distinct campaigns. This is not a count of proven truth violations.
Source-version grouping	Keep each immutable guideline version separate. Similar wording in different campaigns does not imply one shared source.
Decision rate	Latest dismissals plus exceptions divided by all reviewed observations, including reopen. Require at least five distinct reviewed campaign/content revisions.
Identical reruns	Keep the latest completed/partial run per content/source/pack snapshot. Previous-run decisions are not carried forward.
Limits	At most 500 runs and 5,000 decisions; disclose truncation. Evidence drilldowns link exact saved runs and reasons.

A signal to investigate

A high rate can reveal unclear rules or review friction. Owners must inspect reasons before clarifying a guideline. Small samples show no rate. Regulatory dispositions are identified separately and never recommend weakening regulation.

Demonstration integrity

Use clearly labelled fictional campaigns and scripted QA decisions for demonstrations. The implementation does not claim real customer analytics, independent identities or measured model accuracy. Workspace isolation and deleted-campaign visibility remain enforced.

ADDITIONAL DIFFERENTIATOR

Cited advertising-risk review

An owner selects the target jurisdiction, sector and language. The campaign publication date is part of the saved review. Initial scope is selected English outcome, time-bound and absolute-performance signals for India.

Verified reference

The frozen pack uses the CCPA 2022 advertising guidelines, clause 12(a), Gazette PDF page 10. A brief verified quotation is: "shall be capable of substantiation". Each cited finding includes the official URL, source digest, clause/page, retrieval date and pack version.

Example

"Guaranteed results in 30 days" creates one claim-risk prompt with supporting regulation evidence. The reviewer is asked for the outcome definition, evidence reference, audience, conditions and time period. A generic "T&Cs apply" does not automatically resolve the concern.

Negation and ordinary refund controls include "No results are guaranteed" and "30-day money-back guarantee". A metaphor such as "Red Bull gives you wings" is outside the bounded truth analysis. A detected pattern does not establish falsity or a legal breach.

Changes invalidate earlier reliance

Profile versions are immutable and advance the source revision. Reviews pin their profile and pack content. A profile change, installed-pack update or overdue source review can stale earlier approvals while preserving their historical evidence. Incomplete coverage requires explicit reviewer notes, and unresolved findings still block approval.

Pack: in-advertising-risk / 2026-10-31.1
Retrieved: 31 Oct 2026 | source review due: 1 Dec 2026
Source digest: d97e8ab663ebdab8b3e2139465013da14f65dead4fa3e3aa8023df8617fe32f1

Sector-specific regulation, other jurisdictions/languages and complete consumer-law evaluation are outside coverage. The coaching pack remains disabled because the final official instrument could not be retrieved; no guessed clause was activated. Human review records are not legal certification.

A complete local workflow

LAYER	IMPLEMENTATION
Frontend	React 19, TypeScript and Vite; Dark Blue / Desert Sun workspace, caption/poster editing, source evidence, decisions and history.
API and storage	Python, FastAPI, Pydantic, SQLAlchemy; six additive migrations and PostgreSQL-compatible models. Local acceptance uses isolated SQLite.
Documents and images	pypdf in a bounded worker; Pillow normalization; real local Tesseract text, confidence, coordinates and offsets.
Checks	Deterministic structured rules, bounded English claim patterns, visual sample measurements and a frozen legal reference pack.
Safety of evidence	Immutable snapshots, expected-revision guards, owner confirmation, author/requester self-approval restrictions, stale receipts and same-browser session recovery.

Validation

574 backend tests and 56 frontend tests pass locally; frontend lint/build, Ruff and whitespace checks pass. The latest automated results are recorded in docs/ROUND3_LOCAL_ACCEPTANCE_2026-10-31.md. Tests exercise malformed uploads, PDF provenance and partial pages, contrast uncertainty, profile permissions and isolation, legal citations, approval guards, Insights sample limits and restart persistence.

Optional Groq/OpenRouter contextual AI requires server configuration and per-review consent. It is not needed for the deterministic path and is not accepted here as a working live provider. Local claim matching is not general semantic truth verification.

Changes since Round 2

Completed the promised PDF, measured visual and Governance Insights flows locally; repaired contrast sampling; added cited advertising-risk review and profile/pack approval staleness. Existing immutable history, OCR highlighting, explicit corrections and human decisions remain central.

No production team authentication, broad legal advice, general logo/typography certification or all-input accessibility claim is made. Free hosting cold starts and database retention require operational acceptance.

Ready to verify, then submit

Local acceptance gates

Use the dated test report for exact command results and known limitations. Manual desktop/mobile browser acceptance is outstanding because the browser tool rejected access. Docker/PostgreSQL execution was unavailable because Docker socket access was denied. No security permissions were changed to bypass these limits.

Yogita deployment handoff

Deploy the reviewed branch through the team-owned hosting accounts after an additive-migration backup/preflight. Verify the exact frontend/API build pair, health, fresh anonymous session, PDF import, contrast/alt text, cited risk, reviewer decisions, approval staleness, Insights links and persistence after restart. Record results before calling features publicly complete.

Submission package

Working project link, source repository, this updated project report, completed-improvements list, implementation details, testing notes and member contributions. The team leader submits the official form. The supplied deadline is 3 Nov 2026, 23:59 IST; check the official final instructions.

Contributions

Role mapping supplied by the team: Rushab Ramhari Patil owns backend, OCR, AI and database work; Yogita Kanwar owns frontend and integration. This local slice was developed with coding-assistant support. Confirm the final member contribution statement against actual commits and team records; no hours or percentages are inferred.
